

13. If any Color Cream gets on the face or in eye area, remove it with warm soap and water as soon as possible.
14. Processing time will differ depending on temperature fluctuation, the texture and coarseness of the client's hair, and the hair's original color. LASH processing time is 8-10 minutes. BROW processing time is 3 minutes.
15. When processing is complete, remove protection pads from under lower lash area.
16. While the client's eyes remain closed, remove color product with downward motion. Use round cotton pads dampened with warm water and very light pressure. Hold tissue under lower lash area and/or below brow to capture any excess moisture while gently removing color product with cotton pads.
17. If you get Color Cream on your hands, use a cotton ball dampened with ForPro Advanced Hair Color & Stain Remover to remove it. Wash your hands with soap and water immediately.

Note: Occasionally, you may notice oxidation of the Color Cream near the cap. If this occurs, squeeze out the oxidized portion of the Color Cream and discard it. Using oxidized Color Cream could cause undesired color results.

BEFORE APPLYING THIS PRODUCT, YOU MUST PERFORM A SENSITIVITY TEST.

This product contains ingredients that may cause skin irritation on certain individuals and a preliminary test should be made first according to accompanying directions. Using a 1:1 ratio, mix the ecoTint Color Cream with the ecoTint Developer and place 2 small dabs on the inner arm, just above the elbow. Wait 2 minutes, and then gently wipe off with a dry cloth. Wait 24 to 48 hours. If no irritation or inflammation is apparent, it is usually assumed that no hypersensitivity to the product exists. The test must be carried out before each application. If there is any redness or irritation, **DO NOT OFFER THE TREATMENT TO THE CLIENT, AND PUT HER/HIM IN YOUR RECORDS AS BEING SENSITIVE AND NOT ALLOWED TO RECEIVE IT.**

FOR USE BY PROFESSIONALS ONLY!

*Regulations vary state to state. Check with your state board before performing this service.

CLIENT PROTECTION:

1. Drape client appropriately for lash and brow color service. If your client is wearing contact lenses, ask if he or she would like to remove them prior to the service.
2. Client should be sitting upright with head slightly tilted back. **DO NOT** fully recline the client's head because this will increase the risk of color product getting into their eyes.

PRODUCT APPLICATION:

3. Prepare for product application by cleansing the eye and/or brow area with ForPro Makeup Remover Cleansing Towelettes. The lashes and/or brows should be completely dry and free of oil and makeup prior to the color service. Apply skin protectant to skin surrounding eye and/or brow area(s) to avoid staining.
4. Shake the ecoTint Developer before each use. Temperature fluctuation can cause settlement of the product but has no negative effect on the performance of the color. Always store this product in a cool place.

5. Mix a 1:1 ratio of ecoTint Color Cream and ecoTint Developer and stir until the consistency is a creamy paste. The color of the mixture is not the color that the hair will be after processing.
6. Begin color application(s). If applying color to both lash and brow areas, begin with lash application as detailed in Step 7. Apply color product to brows as described in Step 11 while client's eyes are completely closed, AFTER lash color has been applied. If applying color to brows only, you may skip to Step 11 now.
7. To begin LASH COLOR application, place a protective eye pad under the lower lash area on top of the skin protectant. The skin protectant will prevent skin staining and will keep the protective pad in place during product application.
8. Using a mascara wand or disposable lipstick brush, apply the Color Cream mixture to lower lashes first on both eyes. As you begin lower lash application, instruct the client to look up.
9. Make sure the Color Cream covers lashes evenly from base to tip, including lashes at the corners of the eyes. **When lower lashes for both eyes are completed, instruct the client to close his or her eyes until the application and removal process is complete.**
10. Apply Color Cream mixture to upper lashes from base to tip. **DO NOT** press color product into lash area during application. Use light, even strokes to cover lashes with a mascara wand or disposable lipstick brush.
11. To begin BROW COLOR application, make sure the eyebrow hair is completely dry and free of oil and makeup. Apply skin protectant as needed. Instruct client to keep eyes closed until procedure is complete. Apply product to brow, but **DO NOT** press the Color Cream into the skin and **DO NOT** apply product thick enough to drip.
12. If Color Cream accidentally gets in the eyes, take your client to an eyewash station and flush eyes with plain water **immediately!** If you do not have an eyewash station, flush the eyes with saline solution or warm water and pat dry. **DO NOT RUB EYES.** If no irritation occurs, you may reapply the Color Cream immediately. Eyes must be free of redness or irritation to proceed.
